Tecre Company
Attention: Mr. Ray Neitzel
W5747 Lost Arrow Rd
Fond du Lac, WI 54937

Dear Mr. Neitzel,

We have reviewed your request for compliance with the Consumer Product Safety Commission (CPSC) and the Consumer Products Safety Act.

The Consumer Product Safety Commission and the Consumer Products Safety Act applies directly to finished toys and products.

_____ has received certification from our raw material suppliers that the following virgin grade product 6000 using PCN 205 is in compliance with the Coalition of North-Eastern Governors (CONEG) for heavy metals. The heavy metals lead, cadmium, mercury or hexavalent chromium are not deliberately added nor are they present to the best of our knowledge in any raw materials used in their manufacture. We have also received certification from our raw material suppliers that the virgin grade product 6000 using PCN 205 does not contain Phthalates nor are they deliberately added.

_____ does not intentionally add any additives during the manufacture of your product that would deviate from these specifications. _____ maintains lot traceability for each virgin order. As _____ maintains confidentiality with each supplier we regard materials used as proprietary.

Sincerely,

Quality Assurance Manager

Cc: _____

The plastic used for medallion backs, the backs for the rectangles, and the backs for the squares is a high impact black polystyrene plastic. Our supplier has received certification from their supplier that the virgin material they sell does not contain lead, cadmium, mercury or hexavalent chromium nor do they deliberately add these heavy metals during their manufacturing process. This is also true for phthalates.

However, the material we use is a utility grade plastic. Recycled plastic is used in the utility grade and our supplier can not assure us that the recycled plastic does not contain some heavy metals or phthalates. Because of this, your company should not sell the products that use the black plastic to markets that target children 12 years old and under or request virgin material. There will be an increase in price for the virgin material.

This does not apply to the Versa-Back. The Versa-Back uses virgin plastic.

A handwritten signature in blue ink that reads "Ray Neitzel".
